due APRIL 20 Homework Set #1. Consider the Harmonic Oscillator $L(x,\dot{x}) = \frac{1}{2}\dot{x}^2 - \frac{1}{2}x^2$ under the following discretization procedure of the Feynman Path integral (Lecture 2): To = 2TT classical period of oscillador $\Delta t = \frac{1_0}{128}$ $X_0 = -4$, $X_D = +4$ $N_{\rm D} = 600$ $X_{start} = 0.75$ $\alpha = 2$

Calculate the propagator K from Ke elementary K_E matrix $(N_D+1) \times (N_D+1)$ dimensional, **l**. $\mathcal{E} = \frac{T_0}{128} = \Delta t$ for time period $\frac{T_0}{16}$ $K = (\Delta x)^{N-1} \cdot K_{\varepsilon}^{N} (\Delta t)$ 2. Evolve the wave function in time with $\frac{T_0}{16}$ stepsize and measure $\langle X \rangle$ as a function of time. Make a plot 3. Calculate <E>, <K>, <V> is a function of time. Make a plot. 4. Calculate the evolution of the wave function as a function of time. Make plot. 5. Compare your plots with the first three plots of Lecture 2 Animation of the varefunction () 142 and 242
