Physics 2BL: Experiments in Mechanics and Electricity Summer Session I, 2015

Dr. Mark Paddock mpaddock@ucsd.edu Office: 1623 Mayer Hall Addition Phone: (53)4-2504

Introduction

My office is located in the 1623 Mayer Hall Annex mpaddock@ucsd, edu

Lab is located on second floor – MHA 2722

Expectations?

What do you think of physics?

Is this your first lab?

What do you hope to learn?

The Point of the Class

- Learn how scientists form models of nature -the process of doing science
- Learn to assess the accuracy of measurements
- Extend understanding of mechanics/electricity through hands-on exposure
- Learn how to report scientific results

Class components

- Labs MHA 2722
- Lectures MANDE B150
- Homework/Reading
- Website:

http://physics.ucsd.edu/students/courses/su mmer2015/physics2bl

Introduction

- Basics of mechanics and measurements
- Perform 4 labs
 - Two sessions to complete each
 - Design and improve techniques
- Emphasize uncertainties
 - Estimate errors
 - Propagate errors

Labs

- 3 hours per meeting
- Organized around different aspects of scientific methods (observation, forming and testing models, measuring relationships)
- Read lab description and do pre-lab homework
 BEFORE lab session
- Short quizzes at the start of the lab
- Record contact information for your TA

Lab Write-ups

- Begin with lab number & title, date and you and your partners name
- Start with Taylor homework and prelab questions
- State briefly the objective
- Record all data with units and uncertainties
- Brief description of procedure
- Make clear labeled diagrams of setups
- Use graphs to present data, label axes, plot error bars Origin

Lab Write-up continued

- Include and justify functional fit of data
- Show calculations of final derived quantities, include uncertainty analysis
- State results and comment on the agreement with expectations (or not)
 - Be quantitative (within uncertainty, t-value)

Grading

- Three components
 - -70 % for the labs and writeups
 - 20 % prelab quizzes/Homework
 - 10% extend quiz

Lectures

"The lecture method is the process whereby the lecture notes of the instructor get transferred to the notebooks of the students without passing through the brains of either!" --Darrell Huff

That quote pretty much sums up my feelings about modern lectures

That is why I strongly encourage your participation in the lecture process

This is why we will be using clickers (register on TED)

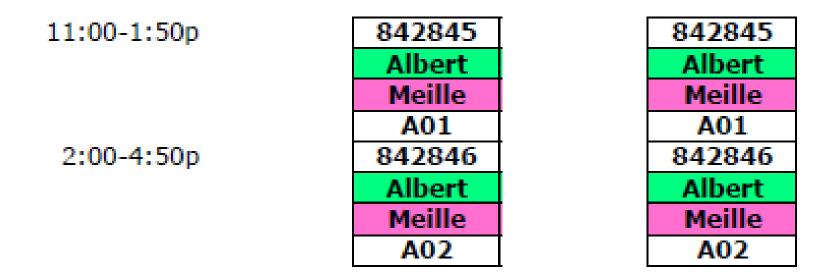

Lectures

- Provide context for labs
- Error analysis
- Homework

Schedule

Meeting	Experiment
1 (Jun 30)	Lab Worksheet (start Taylor)
2 (July 2)	1
3 (July 7)	1
4 (July 9)	2
5 (July 14)	2
6 (July 16)	3
7 (July 21)	3
8 (July 23)	4
9 (July 28)	4
10 (July 30)	Extended Quiz

Teaching Assistants

TAs: Miles Albert (mkalbert@ucsd.edu) Giulio Meille (gmeille@ucsd.edu)

TA Coordinator: Alexander Georges (<u>ageorges@ucsd.edu</u>)

Readings - Text - Homework

- Yes
- Taylor, An Introduction to Error Analysis, 2nd ed.
- Weekly homework on website

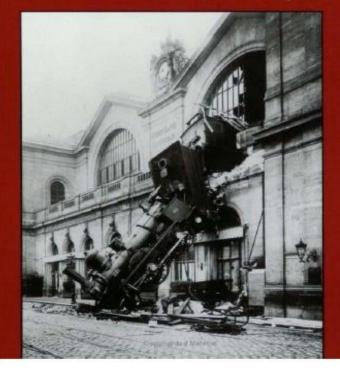

Copyrighted Materia

Error Analysis

THE STUDY OF UNCERTAINTIES

SECOND EDITION

John R. Taylor

How to do Well!

- Show up to all lectures and labs
- Read **before** the lectures the recommended reading
- Before each lab:
- Review lecture slides
- Read experiment guidelines
- -Answer all pre-lab questions within.
- Do the homework/practice problems
- Ask questions!

The Four Experiments

- Determine the average density of the earth Weigh the Earth, Measure its volume
- Measure simple things like lengths and times
- Learn to estimate and propagate errors
- Non-Destructive measurements of densities, inner structure of objects
- Absolute measurements vs. Measurements of variability
- Measure moments of inertia
- Use repeated measurements to reduce random errors
- Construct and tune a shock absorber
- Adjust performance of a mechanical system
- Demonstrate critical damping of your shock absorber
- Measure coulomb force and calibrate a voltmeter.
- Reduce systematic errors in a precise measurement.

Uncertainties/Errors

Errors Mistakes – systematic Uncertainties - not mistakes!

inevitable and intrinsic part of any experiment

Doing Science: Tools for Building Knowledge

- Science is a process that studies the world by:
 - Focussing specific topic (*making a choice*)
 - Observing (*making a measurement*)
 - Refining Intuitions (making sense)
 - Extending (*seeking implications*)
 - Demanding consistency (*making it fit*)
 - Community evaluation and critique

Making a choice

- Choosing a channel on cat television
- Relates to the questions we are asking

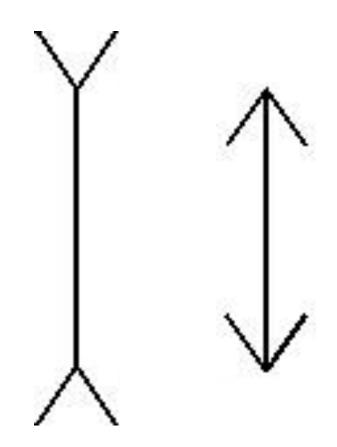

Making a Measurement (and sense)

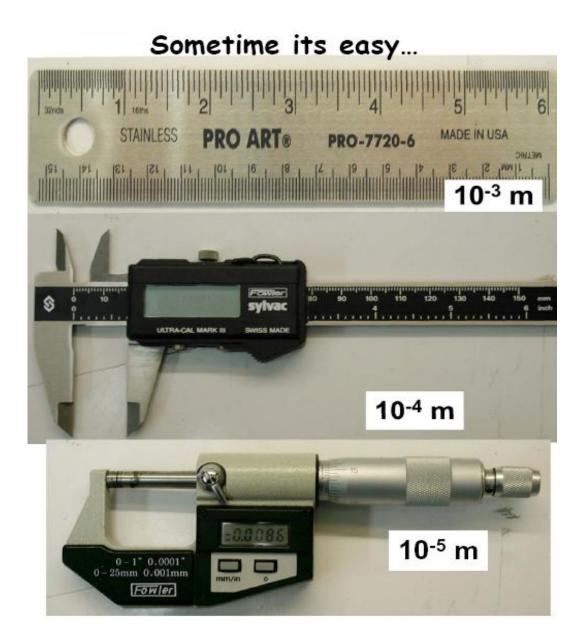

- How do we see the world around us?
- How do we know we see things the same? (reliable)
- How do we know that we see things correctly? (valid)
- Our own VR:
 - We gather info through our senses
 - Our brains interpret these stimula
 - But don't necessarily get them right

Making a Measurement

- Do these line segments look the same?
- Are they?

Uncertainties in devices

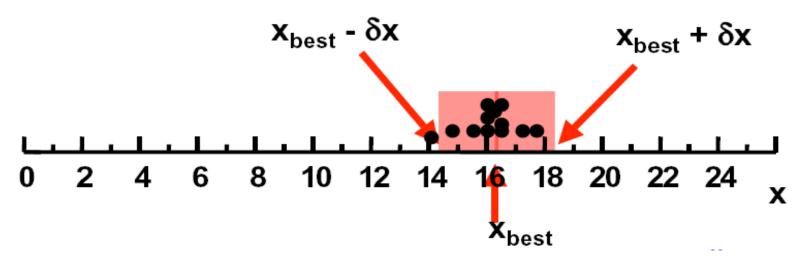

Determine range of values from multiple measurements

Statistically - Take a few measurements of some variable x

- 1. Find the most likely value "best"
- 2. Estimate the spread uncertainty

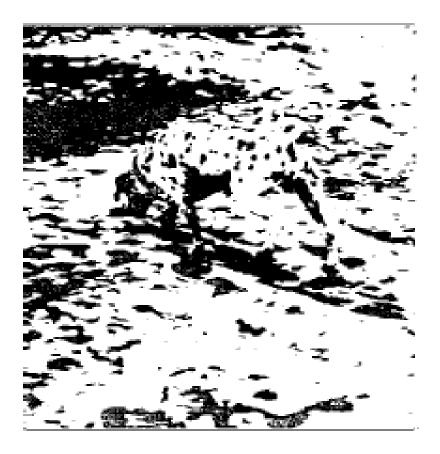

Making Sense

- What is this?
- Hint: it's an animal
- Hint: it's not oriented correctly

Hmmm....

• Does this help?

How about this?

• First this...

Now this

- Context matters...
- Here we are REFINING INTUITION and making sense, which depends upon context

Making sense of physics

- Does this look like dots
- Or deep relations of electric forces

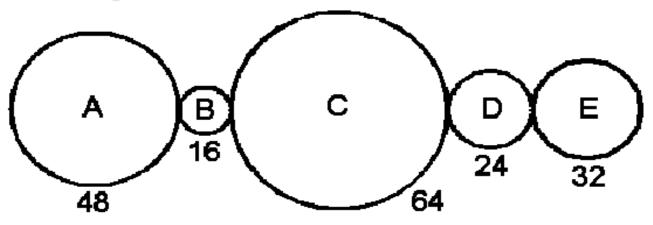

$$\vec{F}_{0} = \frac{1}{4\pi\varepsilon_{0}} \sum_{i=1}^{N} \frac{q_{0}q_{i}}{\left|\vec{r}_{i} - \vec{r}_{0}\right|^{3}} (\vec{r}_{i} - \vec{r}_{0})$$

Seeking Implications

- Elaboration -- when we assume one thing it is bound to have implications beyond the exact case we are considering.
- Figuring out what something implies is a good way to examine the thing itself
- And develop MODELS which are applicable beyond our immediate case

Elaboration

The drawing shows a chain of five gear-wheels, identified as A to E, each one meshing properly with its immediate neighbour(s). The number under each one show how many teeth that particular gear-wheel has.

When A is turned clockwise ten full turns, in which direction does E turn, and how many times?
Birthday

Birthday Problem

Seeking consistency / Making it Fit

- Science seeks consistency in patterns
- Want our principles to be as broad as possible
- Breadth depends upon the state of what we know
- Physics has been around for quite some time and hence, developed a high degree of consistency.

The puzzle analogy

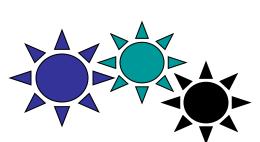

- Seek consistency
- Patterns fit
- Lack of consistency leads to frustration
- The same is true in physics

Next steps... summary cues

- Making a choice
- Making a measurement
- Making sense
- Elaboration
- Coherence

Homework

Read Taylor chapters 1 - 3

Prelab problems

Taylor problems 3.10, 3.28, 3.36, 3.41
