## Homework Set #1.

Consider the Harmonic Oscillator

$$L(x,\dot{x}) = \frac{1}{2}\dot{x}^2 - \frac{1}{2}x^2$$

under the following discretization procedure of the Feynman Path integral (Lecture 2):

$$\Delta t = \frac{T_0}{128}$$

$$N_{\rm D} = 600$$
  $X_0 = -4$ ,  $X_{\rm D} = +4$ 

$$\psi_{0} = \left(\frac{d}{T}\right)^{\frac{1}{2}} = \frac{d}{2} \left(x - x_{start}\right)^{2}$$
initial verefunction

1. Calculate the propagator K from Ke elementary 
$$K_{\mathcal{E}}$$
 matrix  $(N_D+1) \times (N_D+1)$  dimensional,  $\mathcal{E} = \frac{T_0}{128} = \Delta t$  for time period  $\frac{T_0}{16}$ 

$$K = (\Delta x)^{N-1} \cdot K_{\varepsilon}^{N} (\Delta t)$$

- 2. Evolve the wavefunction in time with  $\frac{T_0}{16}$  stepsize and measure  $\langle x \rangle$  as a function of time. Make a plot
- 3. Calculate (E), (K), (V) as a function of time. Make a plot.
- 4. Calculate the evolution of the wave function as a function of time. Make plot.
- 5. Compare your plots with page 4 and 5 plots of Lecture 4-5
- 6. Bonns (142) Animation of the vavefunction required for 242
