We've created the network storage for your class and assigned it to the student course accounts. As we discussed before this is about 600GB of shared space, so the students all need to be considerate and not overload the storage. If things fill up we will let you know and discuss options. Also this storage is currently only available in Mayer 4623 (and 3421). When the students login Mayer they will see an drive icon in their Dock with three human figures on it that is labeled with their account name. This is the easiest way to get to their networked storage, but from the command line they can access it at /Volumes/ph141wXXX.

Sally created the student course accounts below. Students need to look up their course specific accounts going to the Account Lookup link under Tools found at http://acms.ucsd.edu. When they click on the details button for the account there are instructions to set a password which will activate the account. Please tell them to keep in mind if they've been using the network storage on their personal lab account they will probably want to transfer their data (using a flash drive or cloud-storage such as Google Drive or Dropbox) to their ph141xxx course specific account for access when they login with that account.

The list of students:
